Climate Change: Benefits of Dams & Reservoirs

By Roberto May

The benefits of dams and reservoirs are often overlooked when discussing climate change. If the world's dams and reservoirs were managed properly, they could help reduce greenhouse gas emissions and provide a variety of other benefits. This newsletter explores the potential of dams and reservoirs to help address climate change and provides information on the latest research and best practices.

Climate Change: Benefits of Dams & Reservoirs

The world is facing the challenge of climate change, and the need to reduce greenhouse gas emissions is urgent. Dams and reservoirs can play a significant role in addressing this challenge. They can store water, which can be used for irrigation, hydropower, and other purposes. They can also help reduce greenhouse gas emissions by providing a source of clean energy. This newsletter explores the potential of dams and reservoirs to help address climate change and provides information on the latest research and best practices.

ICOLD President's Message

The ICOLD President's Message discusses the organization's commitment to addressing climate change and the role of dams and reservoirs in this effort. It highlights the organization's ongoing work to promote the safe and effective use of dams and reservoirs and to support the development of sustainable water resources.

ICOLD Secretary General's Message

The ICOLD Secretary General's Message discusses the organization's ongoing work to promote the safe and effective use of dams and reservoirs and to support the development of sustainable water resources. It highlights the organization's ongoing work to promote the safe and effective use of dams and reservoirs and to support the development of sustainable water resources.

ICOLD President's Message

The ICOLD President's Message discusses the organization's commitment to addressing climate change and the role of dams and reservoirs in this effort. It highlights the organization's ongoing work to promote the safe and effective use of dams and reservoirs and to support the development of sustainable water resources.

ICOLD Secretary General's Message

The ICOLD Secretary General's Message discusses the organization's ongoing work to promote the safe and effective use of dams and reservoirs and to support the development of sustainable water resources. It highlights the organization's ongoing work to promote the safe and effective use of dams and reservoirs and to support the development of sustainable water resources.

Energy storage and dams

Energy storage is a key component of a sustainable energy system, and dams and reservoirs can play a significant role in this effort. They can store water, which can be used for irrigation, hydropower, and other purposes. They can also help reduce greenhouse gas emissions by providing a source of clean energy. This newsletter explores the potential of dams and reservoirs to help address climate change and provides information on the latest research and best practices.

Climate change and dams

Climate change is a global challenge, and the need to reduce greenhouse gas emissions is urgent. Dams and reservoirs can play a significant role in addressing this challenge. They can store water, which can be used for irrigation, hydropower, and other purposes. They can also help reduce greenhouse gas emissions by providing a source of clean energy. This newsletter explores the potential of dams and reservoirs to help address climate change and provides information on the latest research and best practices.

ICOLD Activities

ICOLD is committed to addressing climate change and the role of dams and reservoirs in this effort. It highlights the organization's ongoing work to promote the safe and effective use of dams and reservoirs and to support the development of sustainable water resources.

ICOLD 2017

ICOLD 2017 is a year of significant achievement for the organization. It highlights the organization's ongoing work to promote the safe and effective use of dams and reservoirs and to support the development of sustainable water resources.
