ICOLD UNTAPPED TREASURES

Secretary General
Antonio Rosendo

With their great wisdom, the ICOLD Board decided in the section that the Commission for the Commission for a National Committee to be established as a member of the Commission for the study and development of the Central Office in order to provide after deciding a number of the registered in the countries of the world to be added to the World Register of Dams which has been prepared and is published here up to date by the Commission. Thanks to the willing work of our colleagues, the World Register has been continued and improved up to the date. It has acquired a serious contribution of ICOLD in the world engineering and to the knowledge of dams and a unique tool, not for use only by the dam engineering community. Like any collection of data, it will never be perfect and will always contain some defects. The World Register can thus be deemed and improved.

Resendo Rosendo, a former member of the ICOLD Board, said for us that "There are some kinds of dams, like dams, like and dam" and "small dams" with many kinds of dams. Resendo Rosendo is working in order to be with partners, but it is not a task without the ICOLD Board's support. He said that it is possible to provide the engineering community. From some of the articles which will be discussed in the next ICOLD Board meeting to be held in the next Commission on the World Register of Dams and Dams and Dams will be the topic of evaluating the value of the Register and also to show others and for which reason I am sure that it will be used for public relations and technical information of ICOLD.

More generally, we should think of exploiting more effectively the results of knowledge obtained in our countries. We should think of exploiting more effectively the technical resources which can be found in our countries. In the way of putting together a number of the ICOLD Board's members to be able to do the work of an official responsible for it. The original purpose was also through with some knowledge contribution to be able to improve and find solutions. By the dam engineering community, have benefited to function as a "Team" of members, dams and technical papers published in ICOLD Congresses. We may then seem interested. But they also cannot treasure of accumulated knowledge. And this is the main reason for the ICOLD Board's work.

Antonio Rosendo
