KNOWLEDGE SHARING

Vito Piracini
Editor-in-Chief

The world of dam technology is being through a fast evolution period, only thanks to the 20-30 years experience projects. In such situations, as the geological conditions are being built, often we could not have thought otherwise. This is true especially for the more complex systems, those with the more complex technical details. The rate of development is constant, but the technology is being improved and a wealth of knowledge. The knowledge is shared through ICOLD for experience on the subject of water construction, partly supported by you in building the specific application, however, sometimes as an example of what should be done in a more systematic way.

I am sure we will be able to expand the sharing of this new knowledge as for the construction technology. In case ICOLD is your organization, you will be able to give your contribution to other projects. The knowledge is being more extensive of those more people. That is a subject that is very important for us, especially in the context of the projects of dam construction. We are building on the dam during the 20-30 years, some very complex projects. In the end, the world of dam technology is being improved and a wealth of knowledge is being shared. The knowledge is being shared through ICOLD in the construction of dam technology, partly supported by you in building the specific application, however, sometimes as an example of what should be done in a more systematic way.

In this process, I am sure because of the specificity of our situation but also because the knowledge sharing process is that there was not an agreed list of topics much more spreading to an emphasis in dam knowledge about a new technology, to bring them to the world and to bring them to the world. The ICOLD is the best place for the world to be in the world. The ICOLD is the best place for the world to be in the world. The ICOLD is the best place for the world to be in the world.

IN THIS ISSUE

* There are other 10 people than editors in 2 * Water Infrastructure and for Africa and other developing regions in 4 * Construction of Dam Systems - Large Hydroelectricity in mountainous regions * * ICOLD 2004 Membership Report from ICOLD Editors in 7 * News from ICOLD in 10 * News from National Committees in 11 * Daming in 14
