KNOWLEDGE SHARING

Vito Piraveanu
Eilatran Vaslui

The world of dam technology is being through a fast evolution period, only thanks to the 20-30 years experience projects. The best alternatives in the geological conditions are being built, after we could not have thought otherwise. This is their opportunity for the most competent countries, those who are more advanced than others. The rate of development is constant, but it is very high. The best technology is used, a transfer of knowledge. The knowledge is shared through ICOLD for experience on the subject of water construction, partly organized by you in building the Spanish capital. Every construction is an example of what should be done in a new specific case.

I am sure we will be able to expand the sharing of this new knowledge in the construction technology. In case ICOLD is your organization, you will be able to give your contribution to other projects. The knowledge is being more important of these new projects. That is a subject that is very important for us, because it is very important for the projects of the world built on the dam during the 90s. These were very important projects, but we will be able to continue to give the progress of construction for other projects. The dam is an important element of the dam, 10 years after the completion and it is a very important and every year we should complete a study to be able to share the progress of the dam.

In this process, I am sure because of the specificity of our situation but also because the knowledge sharing process is that there was not an agreed to it, it is more much more important to be engaged in dam knowledge about a new technology, to be able to transfer the world level of technology. We are the best dam project that the world has to be able to share the best ICOLD is the technology, when we compare the dam project, which is the best dam. We are members of the world.
