### KNOWLEDGE SHARING

**Vito Piraveanu**  
Editor, Vito Piraveanu

The world of dam technology is being through a fast evolution period, only thanks to the 20-30 years experience projects, the best education or by the geological conditions are being built, that we could not have through collection. This is their opportunity for the most competent countries, those who are more advanced than others. The rate of dam building is constant, but the technology is being improved and a wealth of knowledge. The knowledge is shared through ICOLD for experience on the subject of water construction, partly organized by you in building the specific application, however, sometimes as an example of what should be done in a more systematic way.

I am sure we will be able to expand the sharing of this new knowledge as for the construction technology. Because ICOLD is your organization, you will be able to give your contribution to other people, you, knowledge, you bring new techniques of their own people. That is a subject, they are trying to find solutions and you are trying to find the problems of the world, built on the dam, during the 20, 30 years, some very advanced projects, but with the same old conditions and the progress of the technology, but other people may be interested in your experience of the dam, 20 years after the completion and if such as each time and every year, we should complete a study to be done the subject of the dam, water.

In this process, I am sure because of the specificity of our situation but also because the knowledge sharing process is that there was not an agreed to it, it is more much more spreading to an engine to share knowledge about a new technology, to bring them to realize the world level of today, and you are the best, but you are that the world level has been reached, the ICOLD is the technology, when we compare the dam project, which has been built, then we can see all over the world.
