KNOWLEDGE SHARING

Vito Piraveanu
Editor, Newsletter

The world of dam technology is being through a fast evolution period, only to be able to offer the best solutions for each situation or for the specific conditions are being built. But we could not have thought otherwise. This is true especially for the most complex systems, those with the most advanced technologies. The rate of development is constant and it is the only thing that has changed is the level of knowledge. The knowledge is shared through ICOLD for experience on the subject of water construction, partly supported by you in building the specific applications, because it is an example of what should be done in a more systematic way.

I am sure we will be able to expand the sharing of this new knowledge in the construction technology. Because ICOLD is your organization, we will be able to give you information on current dam projects, the knowledge of the long-term behavior of these new projects. That is a subject that is very hot because it is generally not in the program of education or the study built on the dam during the 90s. These new type of dam projects, by the way, will be able to contribute to the program of education for the other generation of dam projects in the future. It is important to have this knowledge and to be able to share it and to have open to the public a way to be able to share the progress of the dam world.

In this process, I am sure because of the specificity of our situation but also because the knowledge sharing process is that there will be a great need of more and more information to be able to share knowledge about a new technology, to be able to make the world work of today and tomorrow. We have to believe that the world will be better and that the ICOLD is the organization where we can get the information, which is the best. Let's see what we can do.

IN THIS ISSUE
 * There are other 10 people than editors in 2 * Water Infrastructure and for Africa and other developing regions in 4 * Construction of the dam - large hydroelectricity in mountainous regions * * ICOLD 2004 Membership Report from ICOLD Editors in 7 * News from ICOLD in 10 * News from National Committees in 11 * Daming in 14
